

# Vitosome™

Aseptic Grape Stem Cell Lysate Rich in Antioxidant, Brightening & Longevity-Supporting Bioactives

**INCI**  
Vitis Vinifera  
Meristem Cell  
Culture Extract

**1-5%**

**Usage level**

- Liquid
- Plant based
- Water soluble
- 100% natural
- Vegan
- Made in the USA
- cGMP-produced

**Vitosome** is derived from red and green grapes that have long been used in Ayurvedic practices (a centuries-old system of herbal wellness used in India and Southeast Asia), and is a powerhouse blend of **natural ingredient**, derived from **Green and Red Grape Stem Cells**, supporting **healthier and resilient skin**.

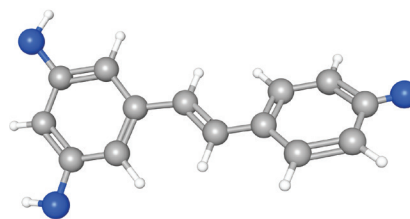

**Traditional Ingredients:** Resveratrol, Arbutin, Vitamin C, Polypodium Leucotomos Extract, Vitamin E

**Typical Performance Profile:** Traditional photoprotection and brightening ingredients typically provide antioxidant defense or regulate melanin production individually.

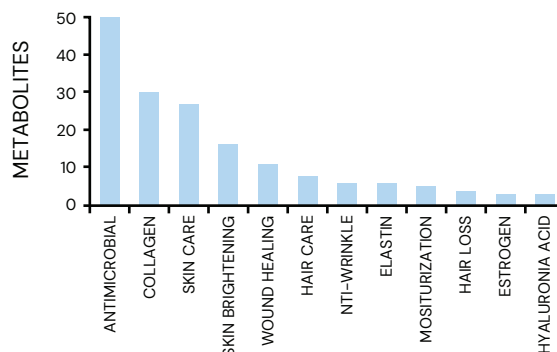

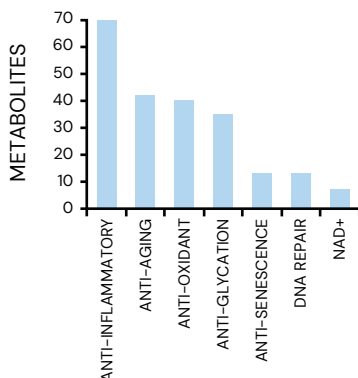

**Vitosome Positioning:** Vitosome contains metabolites including resveratrol, piceatannol, and trehalose associated with photoaging defense, elasticity maintenance, hydration, and pigmentation balance.

**Vitosome** is a powerhouse blend of naturally active compounds that work together to rejuvenate, protect, and energize the skin. Rich in antioxidants like resveratrol, piceid, and myricitrin, it helps defend against environmental stress and visible aging.

Hydrating sugars such as trehalose, sucrose, and ribose boost skin moisture and vitality, while amino acids and energizing molecules like creatine, arginine, and betaine support smoothness, firmness, and overall radiance. With brightening agents like arbutin and soothing components including L-theanine, this Stem Cells extract delivers a comprehensive solution for healthier, more luminous, and youthful-looking skin.

**Resveratrol**, a powerful polyphenol found in **Vitosome** that helps protect the skin from environmental stress and premature aging. It provides strong support to the body's natural antioxidant and anti-inflammatory response, while helping the skin look brighter and firmer. Reduces the visual signs of fine lines and evens out skin tone.

**Vitosome** contains immense numbers of metabolites beneficial for vital processes that support youthful, vigorous, and vital looking skin.

Bar graphs show the number of metabolites identified by LC-MS in the **Vitosome** that support the indicated features.
